

## Aluminum Megayacht Blocks

The clean, crisp look of Harken's lightweight aluminum megayacht blocks are designed to satisfy the most performance-oriented owner. Engineered to remove excess weight, these powerful blocks come in single, stand-up, teardrop, and single and double footblock configurations.

### USES

Used to handle extremely high loads on large oceangoing mono and multihulls.

### FEATURES

Ultra Lightweight Composite bearing system (ULC) rides on a heat-treated 17-4 PH stainless steel inner race to handle primary loads. Snap-fit Turlon<sup>®</sup> ball bearings carry thrust loads.

ULC construction allows a narrower sheave to reduce weight.

The hollow inner race can be used as a becket attachment, reducing weight.

### MATERIALS

Sideplates and sheave are Hardkote-anodized 6061-T6 aluminum for strength and durability.

### OPTIONS

Megayacht blocks are also available in mirror-polished stainless steel.

### MAINTENANCE

Rinse frequently with fresh water and occasionally using a noncorrosive soap.

Blocks can be disassembled for rigging maintenance and part replacement.

The Teflon<sup>®</sup>-impregnated ultra-light composite bearing system (ULC) rides on a heat-treated 17-4 PH stainless steel inner race.

The ultra-light composite bearing construction (ULC) allows a narrower sheave.
