

MVP-1 Single Control & MVP-4 Multi Control Panels

Harken single and multifunction valve panels are used by larger cruisers to control systems like backstays, boom vang, and outhauls. Offered as kits, both single and multifunction panels come with pumps, handles, gauge, pressure relief and release functions, and 4-liter reservoir. Panels come standard with a 2-speed pump. A 3-speed pump is available on request.

The single-function valve is a simple on/off system that can operate the cylinder remotely, allowing the user to tension the backstay cylinder from the cockpit. Multifunction panels can operate up to four cylinders remotely, with a selector handle choosing 1 of 4 functions. Valve panels feature an easy-to-read gauge and a finger-controlled knob for pressure release.

O-ring gasketed panels allow waterproof mounting without additional sealant. Bolt holes also feature waterproof O-rings, preventing water from entering the hull.

Single and multifunction panels come standard in Black Hardkote-anodized 6061-T6 aluminum. Panels also offered in clear-anodized aluminum, stainless steel, or carbon fiber.
