

High-Load Snatch Blocks

Our new line of Snatch Blocks are the work-horses on large yachts from Grand Prix to Megayachts. The LOUP™ attachments, opening sideplates, and simple operation make these compact blocks extremely versatile, allowing crew to quickly fasten them wherever needed. They excel in static line applications that require small adjustments: tack-line leads, barberhaulers, floating athwartship blocks, mastbase halyard leads, Code Zero sheet blocks and sheet deflectors.

The sideplate pivots around the sheave axis, making it easy to attach to a rigged line.

SHEAVES TURN EFFICIENTLY UNDER LOAD

Sheaves turn smoothly and maintain efficiency at high loads with Teflon-impregnated ULC bearing technology. Snap-fit Torlon® ball bearings and integral head-spacer handle thrust loads, and prevent Hardkote-anodized sideplates from deflecting and binding the sheave.

LOUP™ CARRIES PRIMARY LOAD

The lightweight LOUP™ provides the primary load-bearing strength for the block and helps it articulate to create a fair lead. LOUP™ features a durable Spectra® cover and Dyneema® core.

OPENING SIDEPLATE PIVOTS

The sideplate pivots around the sheave axis, making it easy to attach to a rigged line.

VELCRO® STRAP SECURES BLOCK

A strong, Velcro® strap holds block closed when sideplates are aligned.

EASY TO MAINTAIN

The simple construction requires no lubrication and can be flushed clean with fresh water.

A strong, lightweight Velcro® strap holds block closed when sideplates are aligned.
