

High-Load Snatch Blocks

Our new line of Snatch Blocks are the work-horses on large yachts from Grand Prix to Megayachts. The Loop attachments, opening sideplates, and simple operation make these compact blocks extremely versatile, allowing crew to quickly fasten them wherever needed. They excel in static line applications that require small adjustments: tack-line leads, barberhaulers, floating athwartship blocks, mastbase halyard leads, Code Zero sheet blocks and sheet deflectors.

SHEAVES TURN EFFICIENTLY UNDER LOAD

Sheaves turn smoothly and maintain efficiency at high loads with Teflon-impregnated ULC bearing technology. Snap-fit Torlon[®] ball bearings and integral head-spacer handle thrust loads, and prevent Hardkote-anodized sideplates from deflecting and binding the sheave.

OPENING SIDEPLATE PIVOTS

The sideplate pivots around the sheave axis, making it easy to attach to a rigged line.

LOOP CARRIES PRIMARY LOAD

The lightweight Loop provides the primary load-bearing strength for the block and helps it articulate to create a fair lead. Loop features a durable Spectra[®] cover and Dyneema[®] core.

VELCRO[®] STRAP SECURES BLOCK

A strong, Velcro[®] strap holds block closed when sideplates are aligned.

EASY TO MAINTAIN

The simple construction requires no lubrication and can be flushed clean with fresh water.

The sideplate pivots around the sheave axis, making it easy to attach to a rigged line.

A strong, lightweight Velcro[®] strap holds block closed when sideplates are aligned.
