Harken In-Deck Loop Padeyes are recessed into the deck to complement your soft attachment blocks with a discreet, low-profile design. Loop padeyes have a tough yet lightweight construction that carries from 5 to 12+ tons. Without raised components for lines or limbs to catch on, In-Deck Loop Padeyes provide a safe and clutter-free deck.

## USES

High-load loop padeyes work with almost any soft attachment block, including Black Magic<sup>®</sup> Loop blocks, high-load snatch blocks, and TTR blocks.

## FEATURES

Padeye bails and bases are flush against the deck for safety and a clean look.

Harken loop padeyes are lighter and more compact than high-load toggle attachments.

Fixed in-deck padeyes are strong in any direction because they are machined rather than welded.

Load-aligning versions have removable bails for dead-ending soft attachments.

Padeye bases can be tapped for a drain fitting.

## MATERIALS

Loop padeyes are made with mirror-polished 17-4PH stainless steel, titanium, or aluminum.

Blocks without dead-end points (e.g. TTR blocks) require lashings or spliced loops when used with fixed-bail padeyes.

C6395 and C6398 padeyes have a rubber cap that seals padeye housing underdeck for a waterproof system

Part No.	Description	Above deck Ø		Below deck Ø		Weight		Maximum working load	
		in	mm	in	mm	oz	g	lb	kg
C6395	High-load loop padeye	2 <sup>3</sup> / <sub>8</sub>	60	3	76	12.3	350	14994	6800
