

Stainless Steel Blocks

Harken's line of stainless steel Big Boat blocks are designed to take on the most demanding jobs, while preserving the beauty of your yacht's classic lines. Engineered to remove excess weight, these distinctive blocks come in single, single with becket, stand-up, teardrop and single and double footblock configurations. Stainless sideplates are mirror polished for lasting beauty.

USES

Used to handle extremely high loads on mono and multihulls 45 ft (14 m) and up.

FEATURES

Ultra Lightweight Composite bearing system (ULC) rides on a heat-treated 17-4 PH stainless steel inner race to handle primary loads. Snap-fit Torlon[®] ball bearings carry thrust loads.

ULC construction allows a narrower sheave to reduce weight.

The hollow inner race can be used as a becket attachment, reducing weight.

MATERIALS

Stainless steel sideplates are mirror polished for durability and to resist corrosion.

OPTIONS

Blocks in 100 mm sizes and larger are also available in Hardkote-anodized aluminum.

MAINTENANCE

Rinse frequently with fresh water and occasionally using a noncorrosive soap.

Blocks can be disassembled for rigging maintenance and part replacement.

The Teflon[®]-impregnated ultra-light composite bearing system (ULC) rides on a heat-treated 17-4 PH stainless steel inner race.

The ultra-light composite bearing construction (ULC) allows a narrower sheave.
